1. I didn't have many challenges. When I did have challenges though I communicated with my classmates and asked questions.
2. Same thing I didnt have many problems but when I did I asked my classmates what they did to figure out the problem.
3. I didn't really create a plan for coding, I just coded whenever I could.
4. I just compared the project to the class examples done on the smart board and from there decided what tools to use.
5. I wrote the code in small pieces.
6. After every completed part of the code I would run the program just to make sure everything was good and I coded from the first step to the last step of the program.
7. Nothing was too difficult
8. Just ask questions
9. I don't think so.
